# Temporary Beach Closure Notice

---

## Beach is closed temporarily

### ***Why is the beach closed?***

King County crews moved quickly to stop a sewer line leak in West Seattle's Lincoln Park shortly after it was discovered early Saturday morning, February 4. The leak occurred about a half-mile from King County's Barton Street Pump Station north of the Fauntleroy ferry dock.

To stop the leak, King County's Wastewater Treatment Division shut down the Barton pump station and will bypass the damaged line using trucks to haul wastewater from Barton to the Alki Treatment Plant.

Because some flow is still being bypassed from the Barton pump station to an outfall in Puget Sound, the county posted the beach as closed, took water samples, and told health and regulatory agencies about the leak.

For public safety, King County fenced off the area around the leak and coordinated with City of Seattle Parks and Recreation staff to close the beach trail north of the Colman Pool.

### ***When will the beach reopen?***

The county will start repairs on Monday, February 6, as soon as equipment and materials can be brought in. The beach will reopen as soon as repairs are underway and the area is considered safe again.

### ***How did this happen?***

The leak was caused when heavy rains and increased flows caused a section of the 50-year-old pipe to dislocate, creating a 10-foot-diameter sinkhole in the park. Another section of pipe on the same line was damaged after heavy rains on January 17<sup>th</sup>. King County is working on a long-term plan to repair or replace the aging facilities.
